PROFESSIONAL SUMMARY

UI/UX-focused Full Stack Developer with 3 years of experience, ready to help companies turn manual, time-consuming processes into simple and reliable web systems. Brings both design and development skills to the team, helping ideas move smoothly from concept to a finished product with fewer handoffs and consistent quality. Takes time to understand how the business works first, then builds solutions that save time, reduce errors and make daily work easier for staff and customers. Integrates AI tools such as voice agents and workflow automation into business systems, and uses AI-assisted development to deliver work faster. Comfortable owning projects from planning to launch while working closely with the team to support the company's goals.

SKILLS

Design	Figma, Adobe XD, Photoshop, UI/UX design, user flows, prototyping, logo and brand identity, packaging design
Frontend	HTML, CSS, JavaScript, TypeScript, React, Tailwind CSS, Bootstrap, jQuery, AJAX, Konva.js, ApexCharts, DataTables
Backend	Laravel, PHP, MySQL, REST APIs, third-party API integration, role-based permissions
AI Integration & Tools	ElevenLabs voice agents, n8n workflows, e-signature (Signature Pad), AI-assisted development (Claude, ChatGPT)
Workflow & Tools	Git, GitHub, CI/CD, unit testing (PHPUnit/Pest), Agile/Scrum, Visual Studio Code, Shopify, VPS hosting and deployment

WORK EXPERIENCE

Full Stack Developer & UI/UX Designer

May 2025 – Present

XS Enterprise | Full-time, Remote

Full Stack Developer on Bookaroo, a SaaS booking platform for storage, RV park, real estate and wellness businesses, working in an Agile team. Owns key modules from Figma design through to production.

- **Launched a live AI voice receptionist for 3 wellness businesses** without disrupting the AI booking already live for real estate clients. Calls are answered 24/7 and appointments are booked automatically through third-party API integration.
- **Built an interactive site map and booking page in 3 days,** now used for 5+ park layouts at zero recurring cost. Admins draw their own layouts, and customers book from a live map with real-time availability and pricing.
- **Cut storage leasing from 1 day to under 10 minutes** with a lease form that calculates pricing automatically and contracts signed electronically, using a free e-signature library instead of a paid service.
- **Protected client data in the real estate module** by building role-based permissions and a dashboard, so each team member sees only what their role allows.
- **Sped up team delivery with 10+ reusable components used by 3 other developers,** and by getting every Figma design approved before coding, so rework is rare.

Tech: Laravel, PHP, MySQL, JavaScript, REST APIs, Konva.js, Signature Pad, n8n, ElevenLabs, Figma

Shopify Designer & Project Lead

March 2026 – April 2026

Falcon Vision | Freelance Project

Led the redesign of an outdoor sunglasses online store, owning UI/UX, all brand graphics and client communication while a development partner handled theme code.

- **Redesigned a messy, hard-to-shop Shopify store into a polished brand storefront** by reworking the Zenith theme's sections and landing page UI to guide shoppers from the brand story to the products.
- **Created every banner and graphic in one consistent style** in Photoshop, so the client did not need a separate designer or stock images.
- **Organized 7 products and their variations into clear collections** (6 sunglasses with multiple variations and 1 cap with 5), so shoppers find the right item in fewer clicks.
- **Sped up page loading** by exporting every graphic in a lightweight web format without lowering image quality.

- **Launched the live store in 1 month and 1 week** by leading client meetings and getting every design approved before it was built, with positive client feedback.

Tech: Shopify, Photoshop

Full Stack Developer & UI/UX Lead
September 2024 – February 2025

Toyota Albay | Freelance Project

Full stack developer and UI/UX lead in a 4-person team that built a sales system tracking every vehicle from first lead to release. Designed the process flow, database and interface.

- **Replaced spreadsheets, logbooks and group chats with one system for 20–30 sales agents** by mapping the sales process and designing the database for one pipeline: inventory, leads, reservation, earmarking and releasing.
- **Ended duplicate customer records** that had agents chasing the same buyer, caused commission disputes and inflated lead counts, by giving each customer one shared record.
- **Cut sales reporting from days to instant** with live dashboards and per-agent performance tracking.
- **Sped up development for the 4-person team** by setting the process flow, database design and UI everyone built on. Joined client meetings with Toyota executives and delivered on schedule, with positive feedback.

Tech: Laravel, PHP, MySQL, Bootstrap, ApexCharts, Figma

Web Developer & UI/UX Designer
July 2024 – February 2025

Bicol University Graduate School | Full-time, On-site

Sole designer and developer of Honorarium Monitoring System, from requirements gathering through launch.

- **Made honorarium payments transparent for 70+ faculty** with real-time tracking that shows which office is handling each claim and its current status, ending office-to-office follow-ups.
- **Digitized a paper-based approval chain across 4 offices** (Dean, Admin, Budget, Cashier), with each office acknowledging documents in the system so claims no longer stall or go missing.
- **Reduced status questions to office staff** with automatic email and in-app alerts at every approval step.
- **Delivered the full system solo and on time,** from requirements gathering with each office through design, development and testing, with positive feedback from the Graduate School.

Tech: Laravel, PHP, MySQL, Bootstrap, jQuery, DataTables

EDUCATION

Bachelor of Science in Information Technology
2018 – 2022

Bicol University Polangui Campus

- **Dean's Lister,** 2020–2021
- **Elected officer** of the IT+ Organization for two consecutive years
