PROFESSIONAL SUMMARY

UI/UX-focused Full Stack Web Developer with 3 years of experience, ready to help companies turn manual, time-consuming processes into simple and reliable web systems. Brings both design and development skills to the team, helping ideas move smoothly from concept to a finished product with fewer handoffs and consistent quality. Takes time to understand how the business works first, then builds solutions that save time, reduce errors and make daily work easier for staff and customers. Integrates AI tools such as voice agents and workflow automation into business systems, and uses AI-assisted development to deliver work faster. Comfortable owning projects from planning to launch while working closely with the team to support the company's goals.

SKILLS

Design	Figma, Adobe XD, Photoshop, UI/UX design, user flows, prototyping, logo and brand identity, packaging design
Frontend	HTML, CSS, JavaScript, React, Bootstrap, jQuery, AJAX, Konva.js, ApexCharts, DataTables
Backend	Laravel, PHP, MySQL, REST APIs, role-based permissions
AI Integration & Tools	ElevenLabs voice agents, n8n workflows, e-signature (Signature Pad), AI-assisted development (Claude, ChatGPT)
Platforms & Tools	Visual Studio Code, GitHub, Shopify, VPS hosting and deployment

WORK EXPERIENCE

Full Stack Developer & UI/UX Designer
May 2025 – Present

XS Enterprise | Full-time, Remote

Developer on Bookaroo, a SaaS booking platform for storage, RV park, real estate and wellness businesses. Owns key modules from Figma design through to production.

- **Brought AI call booking to the wellness market without disrupting a live system.** Real estate clients were already using AI booking in production, so the new voice receptionist was integrated for wellness businesses as a separate setup. Calls are now answered 24/7, FAQs are handled and appointments are booked automatically, with no downtime for existing users.
- **Built an interactive site map and booking page in 3 days, with zero recurring cost.** RV parks needed a visual booking map like Campspot's, but map services charge ongoing fees. Designed and built a self-hosted 2D map builder: admins draw their own park layouts, and customers book from a live map showing real-time availability and pricing.
- **Replaced manual quoting and paper contracts with one automated leasing flow.** Leasing a storage unit meant quoting prices by hand and signing paper. Built a lease form that calculates pricing automatically and generates contracts customers sign electronically, using a free e-signature library instead of a paid service like DocuSign.
- **Prevented data access problems in the real estate module.** Built role-based permissions and a dashboard so each team member sees only what their role allows, keeping client data private.
- **Overall:** Speeds up delivery by designing every feature in Figma and getting it approved by management before coding, so rework is rare. Also builds reusable components the whole development team uses, keeping the product consistent and saving teammates from rebuilding the same parts.

Tech: Laravel, PHP, MySQL, JavaScript, Konva.js, Signature Pad, n8n, ElevenLabs, Figma

Shopify Designer & Project Lead
March 2026 – April 2026

Falcon Vision | Freelance Project

Led the redesign of an outdoor sunglasses online store, owning UI/UX, all brand graphics and client communication while a development partner handled theme code.

- **Turned a messy, hard-to-shop store into a polished brand storefront.** Products were unorganized and the pages felt generic. Redesigned the Zenith theme's sections and reworked the landing page UI, laying out each section to guide shoppers from the brand story to the products.
- **Gave the brand one consistent look at no extra cost.** Created every banner and graphic in Photoshop in a single style, so the client did not need to hire a separate designer or buy stock images.

- **Made products easier to find.** Reorganized the catalog into clear collections by category, so shoppers reach the right product in fewer clicks.
- **Sped up page loading.** Exported every graphic in a lightweight web format, keeping pages fast without lowering image quality.
- **Overall:** Led client meetings and got every design approved before it was built, avoiding rework. Launched the live store in 1 month and 1 week, with positive feedback from the client.

Tech: Shopify, Photoshop

Full Stack Developer & UI/UX Lead

September 2024 – February 2025

Toyota Albay | Freelance Project

Full stack developer and UI/UX lead in a 4-person team that built a sales system tracking every vehicle from first lead to release. Designed the process flow, database and interface.

- **Replaced spreadsheets, logbooks and group chats with one system for 20–30 sales agents.** Leads and vehicles were tracked across scattered Excel files, paper forms and chat messages. Mapped the sales process and designed the database behind a single pipeline covering inventory, leads, reservation, earmarking and releasing, so everyone works from the same up-to-date records.
- **Stopped agents from chasing the same buyer.** Duplicate customer records caused two agents to work one customer, sparked commission disputes and inflated lead counts. One shared record per customer ended the double-handling, made sale ownership clear and kept reports accurate.
- **Cut sales reporting from days to instant.** Monthly and quarterly reports took days to compile by hand. Built live dashboards with per-agent performance tracking, so management sees results anytime.
- **Overall:** Set the process flow, database design and UI the whole team built on, keeping the system consistent and speeding up development. Joined client meetings with Toyota executives, delivered on schedule and received positive feedback from management after launch.

Tech: Laravel, PHP, MySQL, Bootstrap, ApexCharts, Figma

Web Developer & UI/UX Designer

July 2024 – February 2025

Bicol University Graduate School | Full-time, On-site

Sole designer and developer of Honorarium Monitoring System, from requirements gathering through launch.

- **Ended office-to-office follow-ups for 70+ faculty.** Professors had to visit offices, call or simply wait to learn whether their honorarium was ready. Built real-time claim tracking so each professor sees where their claim stands and how much they can claim.
- **Stopped documents from getting lost between 4 offices.** Paper logbooks let claims stall or go missing between the Dean, Admin, Budget and Cashier offices. Digitized the whole approval chain, with each office acknowledging documents in the system, so claims move faster and nothing slips through.
- **Freed office staff from constant status questions.** Set up automatic email and in-app alerts at every approval step, keeping faculty informed without staff answering calls.
- **Overall:** Gathered requirements directly from each office, then designed, built and tested the full system solo. Delivered on time, with positive feedback from the Graduate School.

Tech: Laravel, Bootstrap, jQuery, DataTables, MySQL

EDUCATION

Bachelor of Science in Information Technology

2018 – 2022

Bicol University Polangui Campus

- **Dean's Lister,** 2020–2021
- **Elected officer** of the IT+ Organization for two consecutive years
